

## » Graph Stories

This will be a fun exercise, where English meets Maths!

You are to write your answers on separate paper, to be collected next week. Your answers are to be detailed and neat. You may be imaginative, but your stories *must* adequately match the graphs provided. You will be marked on effort and accuracy.

For each graph, write a story between  $\frac{1}{4}$  and  $\frac{1}{2}$  a page in length. Feel free to answer the graphs in any order, to connect all the graphs with one long story or to write completely different stories about each individual graph.
